Decrypting connection string command-

cd C:\Windows\Microsoft.NET\Framework\v4.0.30319

aspnet_regiis -pdf "connectionStrings" "C:\Program Files (x86)\CSC\WCFService"

Thanks,
Mahendra Pratap, PMP, CSM, CSQA

Subject: Clean Installation - Details

Hi Imteyaz/Kumud,

Please keep this information handy for clean installation of builds- if required in future

Take the backup of the existing CSC folder in C:\program files folder of server machine where application is deployed.
Remove the exiting version of RisKmaster application - UnInstall the Business/Presentation layer
Delete the CSC folder - (STOP RM TASK MANAGER if files are not getting copied/deleted)
Start RM Task manager
Restart the server

Install this new version followed by db/pv upgrade
1. keep server machine/name handy
2. keep connection string details handy (Supporting databases' name, user id/passwords)

Thanks,
Mahendra Pratap, CSM, CSQA
